

ORIGIN OF COMPUTERIZATION IN KPSC

KPSC adopted the upcoming techniques of Computerization for its effective public service way back in 1980 itself. Starting with a small setup of 6 Computers and Computerization of one department today it has climbed to larger heights where all departments are computerized with up-to-date technology utilization thereby rendering the most effective service to the public. We have a centralized Computer center with most advanced equipments.

As a result of Computerization KPSC is providing transparent, accurate, fast and public friendly services. By launching its own website KPSC has tried to go to the doors of Candidates rather than making them to come to office and wait in queues for information. Days where the candidate from distant corners of the state used to wait eagerly for information days together and spend lots of money and time have become history.

WORK CARRIED OUT IN KPSC COMPUTER CENTER

Computer center carries out the Electronic Data Processing work as per the needs of the Commission.

The major examination related activities are as follows : -
